

(問題)

$$\frac{306}{\square + 409} = \frac{17}{23}$$

(解説)

$$\frac{306}{\square + 409} = \frac{17}{23}$$

$$306 \div 17 = 18 \text{ より, } \underline{\text{分母} \times 18}$$

$$\square + 409 = \underline{23 \times 18}$$

414

$$\begin{aligned} \square &= 414 - 409 \\ &= 5 \end{aligned}$$

5
