

(問題)

$$\left(1.9 - \frac{4}{5}\right) \div \frac{11}{20} - \left(\frac{5}{8} \times 2.4 - 0.5\right)$$

(解説)

$$\left(1.9 - \frac{4}{5}\right) \div \frac{11}{20} - \left(\frac{5}{8} \times 2.4 - 0.5\right)$$

$$\textcircled{1} \text{ -- } \frac{4}{5} = 4 \div 5 = 0.8 \text{ より}$$

$$1.9 - 0.8 = 1.1 = \frac{11}{10}$$

$$\textcircled{2} \text{ -- } \frac{11}{10} \div \frac{11}{20} = \frac{11}{10} \times \frac{20}{11} = 2$$

$$\textcircled{3} \text{ -- } \frac{5}{8} \times 2.4 = \frac{5}{8} \times \frac{24}{10} = \frac{3}{2} = 1.5$$

$$\textcircled{4} \text{ -- } 1.5 - 0.5 = 1$$

$$\textcircled{5} \text{ -- } 2 - 1 = 1$$
