

(問題)

$$\left\{ (2 \times \square - 3) \times \frac{2}{7} + \frac{5}{7} \right\} \div 0.5 = 2$$

$$\left\{ (2 \times \square - 3) \times \frac{2}{7} + \frac{5}{7} \right\} \div 0.5 = 2$$

$$\left\{ \quad \quad \quad \right\} = 2 \times 0.5$$

$$\left\{ \quad \quad \quad \right\} = 1$$

$$(2 \times \square - 3) \times \frac{2}{7} + \frac{5}{7} = 1$$

$$(2 \times \square - 3) \times \frac{2}{7} = \left(1 - \frac{5}{7} \right)$$

$\frac{2}{7}$

$$(2 \times \square - 3) = \frac{2}{7} \div \frac{2}{7}$$

$$= \frac{2}{7} \times \frac{7}{2}$$

$$= 1$$

$$2 \times \square - 3 = 1$$

$$2 \times \square = 1 + 3$$

$$= 4$$

$$\square = 4 \div 2$$

$$= 2$$

2
