$$\underbrace{(\square + \frac{5}{21} - \frac{4}{35})}_{\textcircled{1}} \div \underbrace{(\frac{5}{6} + \frac{1}{2})}_{\textcircled{2}} = \frac{9}{14}$$

$$(\square + \frac{13}{3 \times 5 \times 7}) \div \frac{4}{3} = \frac{9}{14}$$

$$(\quad) = \frac{9}{14} \times \frac{4}{3} = \frac{6}{7}$$

$$\square + \frac{13}{3 \times 5 \times 7} = \frac{6}{7}$$

$$\square = \frac{6}{7} - \frac{13}{3 \times 5 \times 7}$$

$$= \frac{90-13}{3 \times 5 \times 7}$$

$$= \frac{77}{3 \times 5 \times 7}$$

$$= \frac{\cancel{7} \times 11}{3 \times 5 \times \cancel{7}}$$

$$= \frac{11}{15}$$

$$\textcircled{1} \cdot \cdot \frac{5}{21} - \frac{4}{35} = \frac{25-12}{3 \times 5 \times 7} = \frac{13}{3 \times 5 \times 7}$$

$\overset{3 \times 7}{\underbrace{\quad}} \quad \overset{5 \times 7}{\underbrace{\quad}}$

$$\textcircled{2} \cdot \cdot \frac{5}{6} + \frac{1}{2} = \frac{4}{3}$$

$\frac{11}{15}$
